

Overview

Begin your system architect journey by learning the capabilities of Pega's low-code design studios, to develop Pega applications that advance the digital transformation of organizations.

Through demonstrations, discussions and lots of hands-on exercises, you will learn how to perform the most common application development tasks using App Studio and Dev Studio to prepare yourself for your first Pega development project, including, core Pega Platform application development principles, working with rules, data objects, case management and much, much more.

Discover why Pega is ranked as the leader in low-code, business process transformation.

Implementation ready.
Classroom experience.
Hands-on learning

labb courses are designed and developed by **Pega-certified experts**.

Attendees **interact** with an expert instructor, receiving comprehensive, clear, and concise learning during class, to acquire the skills needed to implement high-quality Pega applications.

We provide you with the **skills** and **hands-on experience** required to successfully design, build and deploy Pega solutions. At the same time, preparing you to become a Pega Certified Professional.

Benefits

By the end of this course, you will be able to successfully:

- Rapidly develop and configure *Build for Change* capabilities generated by design wizards to create robust, rule-based applications.
- Configure rules for the implementation of situational layer cake behaviors supporting microjourneys.
- Advise and guide citizen developers and stakeholders on best practices and techniques.
- Work data objects to design robust, reusable data models.
- Understand out of the box case management and decisioning features

Details

Target Audience

System architects and developers who are looking to further their skills and ability to implement quality Pega applications.

Prerequisites None

Length 8 classroom days

Delivery Instructor-led

Topics

- Case management
- DevOps Deployments
- Pega Express delivery
- Reporting
- User Experience
- Data management
- Integration
- Managing rules
- Security
- Application development

Become a Pega Certified System Architect

The PCSA certification focuses on the ability to take part in the design and configuration of Pega apps, directly capturing business requirements.
